

Pilots - Gages and Tools

Contact SL for information on the below items that will make using Pilot Assemblies easier

	<p>Machining Bore Gages</p>	<p>SL highly recommends using gages when performing the machining required to mount our Pilot Assemblies. The gages will help to ensure a good fit for the Pilot body, not too tight and not too loose. Your CNC department will appreciate these!</p>
	<p>Spring Retainer / Spring Assembly Tool</p>	<p>This tool makes it easier to dis-assemble and re-assemble the spring and spring keeper on the bottom of the ejector style pilots. Simple Instructions for use are provided.</p>
	<p>Round Stripper / Spring Assembly Tool</p>	<p>This tool makes it easier to dis-assemble and re-assemble the Round Stripper and Spring on the Round Stripper style pilots. Simple Instructions for use are provided.</p>
